The Australian Land & Groundwater Association (ALGA) aims to bring people with like interests together to network, build capacity, exchange ideas and further the science and technology surrounding the prevention, assessment and remediation of contaminated land and groundwater in Australia. For both individuals and companies, ALGA membership is the best way to stay connected with other individuals and companies operating in the contamination remediation sector. Become a member or sponsor today.

Aqualab Scientific supplies water quality and level monitoring instruments such as HYDROLAB water quality multiprobes measure and store temperature, pH, conductivity, luminescence dissolved oxygen, turbidity, chlorophyll a, blue-green algae, redox and depth, all in one rugged multiprobe. These instruments are used for monitoring lakes, rivers, estuaries, oceans, groundwater and wastewater. We also supply DIVER temperature, level and conductivity data loggers for groundwater monitoring, TURNER DESIGNS fluorometers for chlorophyll a, blue-green algae and dye trace studies, HACH/SIGMA water and wastewater automatic samplers and flow meters and OTT level and discharge sensors and data loggers.

SPECIALISTS IN ENVIRONMENTAL,
SOCIAL AND SAFETY PERFORMANCE

Coffey Environments provides a wide range of technical consulting services to transform environmental, social and safety expenditure into investment. We specialise in the design and implementation of site remediation systems. We know that establishing practicable remediation targets with all stakeholders is critical to maximising project value for site owners and ensuring remedial goals are reached cost-effectively. Coffey Environments experiences span engineering, physical, chemical, biological and thermal remedial techniques.

The Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (CRC CARE) is a research and development organisation providing cutting-edge technologies and knowledge in assessing, preventing and remediating contamination of soil, water and air. CRC CARE provides industry with the opportunity to work with world-class researchers to solve existing and prevent future contamination issues. CRC CARE works collaboratively with universities, government, regulators, industry, venture capitalists, environment consultants and suppliers remediation sites and issues.

EESI Contracting is a specialist remediation contractor with offices throughout Australia and overseas. EESI Contracting provides unique scientific based solutions to contaminated soil and groundwater. We have a background in contaminant geosciences and soil science and can therefore provide unique science-based solutions to contaminated soil and groundwater. EESI Contracting pioneered the sustainable on-site and off-site treatment of contaminated soil over 10 years ago. The innovative application of bioremediation and chemical stabilisation assists our clients in meeting the various strict environmental regulatory controls that are in place in Australia.

E-Nose Pty Ltd

ABN 14 103 740 567

E-Nose Pty Ltd designs and manufactures “e-noses” - continuous real-time monitoring systems for airborne chemicals and smells. Our units and allied services are being used at abattoirs and sewage treatment plants to reduce the risks of environmental litigation. E-noses can also increase efficiency in odour abatement equipment and deliver direct cost savings. Our new “graffiti-e-nose”™ device is making a mark in the detection and apprehension of graffiti vandals, thereby reducing cleanup costs borne by the community

Envirodata designs and manufactures weather stations and weather sensors for Australian conditions. We have 28 years of experience in providing weather-monitoring solutions and the technical expertise, service and support to back it up. Envirodata can help you find the best solution to monitor weather, wind movement and Sigma Theta at your specific site for the management of microenvironments, contaminated sites, water storage and treatment areas. Our weather stations meet the Australian Standards and EPA requirements.

Booth 08

The Remediation Group specialises in practical site remediation. Our in-depth knowledge of the whole remediation cycle means we anticipate contingencies at the design stage, and deliver solutions that work on the ground, not just on paper. We combine practical services and proven methods with reliable products and strong partners, delivering world class solutions supported by local knowledge. We are proud to be trusted by oil, mining, manufacturing and property development companies and their consultants in Australia and overseas, helping them turn environmental liabilities into valuable assets.

ThermoFisher S C I E N T I F I C

The world leader in serving science

Thermo Fisher Scientific excels in delivering a range of specialised technology-focused products, professional applications support and instrumentation servicing in the environmental assessment and remediation markets. Our product lines include QED Environmental Systems groundwater pumps and treatment systems, in-situ water quality and level monitoring instrumentation and a comprehensive range of water, soil and air sampling equipment. In addition to sales, Thermo Fisher Scientific also has a wide range of portable field equipment available for rent.
